WIRING CONNECTIONS:

- Connect BLUE wire to output of running light wire.
- Connect RED wire to output of brake switch.
- Connect WHITE wire to output turn signal wires.
- Connect BLACK wire to system ground (Battery Negative).

DESCRIPTION OF OPERATION:

Running Lights:

Applying +12VDC to BLUE wire will turn on all LED's to medium intensity.

Brake Lights:

Applying +12VDC to RED wire when brakes are applied to assure visibility and safety.

Turn Signals:

Applying +12 VDC to WHITE wire will drop out brake and running lights.
